

MIDLAND ARCHITECTURAL DOORS

DESIGNED FOR YOU. BUILT TO LAST.

Aesthetics: Available in bi-fold and hydraulic lift styles with nearly any finish and in virtually any size and color to reflect your desired style. The operating system is mounted and concealed in the door's headers while the lifting mechanisms are hidden behind the door's uprights, resulting in clean lines and enhanced headroom.

Durability: All-steel construction, a robust electric or hydraulic system and engineering to meet deflection requirements provide extreme durability in any environment on an internal or external wall.

Functional: Modern aesthetics. Functional purpose. Eye-catching design. Provides shade when open to keep restaurant and bar patrons cool, divides interior spaces into multiple meeting rooms, and enhances traffic flow in and out of buildings by opening up an entire wall.

Safety: Optional safety switches stop the door if anything interferes during opening or closing, and our exclusive 5-to-1 safety factor ensures the door's load-carrying capacities exceed the actual load.
